

Come Clean Go Clean

Come Clean Go Clean is one of the simplest yet most effective strategies for minimising the spread of weeds, diseases and pests. With the increase in prevalence of glyphosate resistant weeds, the spread of mealy bug and the constant threats from disease it is important that we all pay particular attention to ensuring vehicles and equipment entering farms are thoroughly washed down prior to gaining access.

This is important at all times, as vehicles and equipment move from one field to another, one farm to another and from one region to another. It is very easy to move weed seeds, soil particles and crawlers resulting in the rapid spread of difficult-to-control pest species throughout the industry.

Declare war on weeds

Practicing good farm hygiene will help prevent the entry and spread of diseases, weeds and pests onto your farm, and stop them impacting on your business!

Make Come Clean Go Clean a priority

Come Clean Go Clean takes commitment, especially during busy periods such as picking. But the risks are real, so ensure that all equipment and people stop and clean down.

Inform visitors of their responsibilities

Placing signage on your farm boundaries to inform visitors that Come Clean Go Clean is important and that they share responsibility for protecting your farm from risks is one of the key steps you can take. Signs should be placed at all external entrances, directing visitors to only enter with clean vehicles and to contact the farm office before entering.

Come Clean Go Clean requirements should be communicated with contractors and consultants well in advance.

Stop the spread of diseases!
Including endemic diseases (eg. fusarium) & exotic diseases.

Stop the spread of weed seeds!
Including new species and herbicide resistant plants.

Stop the spread of insect pests!
Including endemic pests (eg. mealybugs) and exotic species.
